

CLAIMS:

1. A dielectric porcelain composition comprising  $\text{MgTiO}_3$  and  $\text{Mg}_2\text{SiO}_4$ , characterised in that the composition satisfies  $a + b = 1$  and  $0 < b < 1$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$ .
2. The composition according to claim 1, characterised in that the molar ratio  $b$  is defined as  $0.5 \leq b < 1$
3. The composition according to claim 1, characterised in that the composition is a dielectric porcelain composition calcined at a temperature of not less than  $1300^\circ\text{C}$ .
4. A dielectric porcelain composition comprising  $\text{MgTiO}_3$  and  $\text{CaTiO}_3$ , characterised in that the composition satisfies  $a + c = 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ .
5. The composition according to claim 4, characterised in that the molar ratio  $c$  is defined as  $0.03 \leq c \leq 0.08$ .
6. The composition according to claim 4, characterised in that the composition is a dielectric porcelain composition calcined at a temperature of not less than  $1250^\circ\text{C}$ .
7. A dielectric porcelain composition comprising  $\text{MgTiO}_3$ ,  $\text{Mg}_2\text{SiO}_4$  and  $\text{CaTiO}_3$ , characterised in that the composition satisfies  $a + b + c = 1$ ,  $0 < b < 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$ ,  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ .

8. The composition according to claim 7, characterised in that the molar ratio  $b$  is defined as  $0.5 \leq b < 1$  and the molar ratio  $c$  is defined as  $0.05 \leq c \leq 0.09$ .

9. The composition according to claim 7, characterised in that the composition is a dielectric porcelain composition calcined at a temperature of not less than 1300°C.

10. A dielectric resonator using as a dielectric material a dielectric porcelain composition comprising  $\text{MgTiO}_3$  and  $\text{Mg}_2\text{SiO}_4$  and satisfying  $a + b = 1$  and  $0 < b < 1$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$ .

11. A dielectric resonator, characterised in that it uses as a dielectric material a dielectric porcelain composition that comprises  $\text{MgTiO}_3$  and  $\text{CaTiO}_3$  and satisfies  $a + c = 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ .

12. A dielectric resonator characterised in that it uses as a dielectric material a dielectric porcelain composition that comprises  $\text{MgTiO}_3$ ,  $\text{Mg}_2\text{SiO}_4$  and  $\text{CaTiO}_3$  and satisfies  $a + b + c = 1$ ,  $0 < b < 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$ ,  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ .

13. A manufacturing process for a dielectric porcelain composition that comprises  $\text{MgTiO}_3$  and  $\text{Mg}_2\text{SiO}_4$ , characterised in that it comprises a step of adjusting a content of  $\text{Mg}_2\text{SiO}_4$  to satisfy  $a + b = 1$  and  $0 < b < 1$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$ , thereby adjusting relative permittivity  $\epsilon_r$ .

14. A manufacturing process for a dielectric porcelain composition that comprises  $\text{MgTiO}_3$  and  $\text{CaTiO}_3$ , characterised in that it comprises a step of adjusting a content of  $\text{CaTiO}_3$  to satisfy  $a + c = 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ , thereby adjusting temperature coefficient  $\tau_f$ .

15. A manufacturing process for a dielectric porcelain composition that comprises  $\text{MgTiO}_3$ ,  $\text{Mg}_2\text{SiO}_4$  and  $\text{CaTiO}_3$ , characterised in that it comprises a step of adjusting respective contents of  $\text{Mg}_2\text{SiO}_4$  and  $\text{CaTiO}_3$  to satisfy  $a + b + c = 1$ ,  $0 < b < 1$  and  $0 < c \leq 0.15$ , wherein  $a$  denotes a molar ratio of  $\text{MgTiO}_3$ ,  $b$  denotes a molar ratio of  $\text{Mg}_2\text{SiO}_4$  and  $c$  denotes a molar ratio of  $\text{CaTiO}_3$ , thereby adjusting relative permittivity  $\epsilon_r$  and temperature coefficient  $\tau_f$ .
